

Locate Application Information

Additional Practice

5 - 10 Minutes

Lab Objective

You will achieve the following objectives:

- Locate application information

Lab Dependency: None

Section 1: Locate Application Resources

First, you will do some research to learn the basics about the Human Resources applications and instructions on where to start. ServiceNow Documentation is a great place to start. However, learning a few tips so you can find the most relevant information will go a long way in finding what you need.

1. Open a **browser tab** and go to **docs.servicenow.com**.
2. In the **search** box, type **human resources**, then press **Enter**.
3. Scan the list of returned documents and locate the **Human Resources agent dashboard** document.
4. Read the **top part** of the article.

Human Resources agent dashboard

Release version: Yokohama ▾ | Updated Jan 29, 2025 | ⌚ 2 minutes to read

The dashboard for HR Agents monitors caseloads to help stay on top of the backlog, enabling the HR Agent to provide a streamlined experience for the organization workforce.

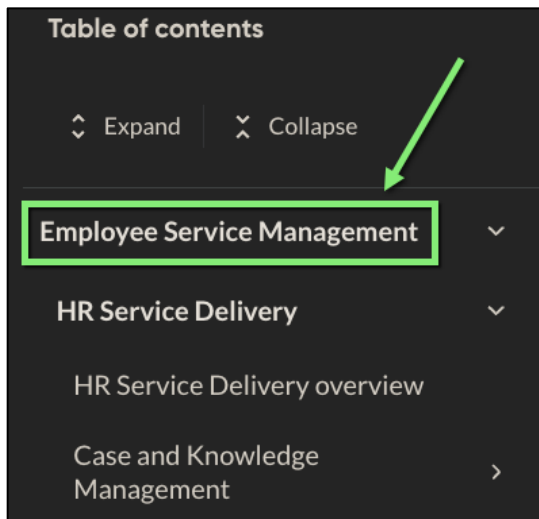

Good information, but not exactly the information you need.

5. Above the document **title**, locate the **topic path** for the document.

[Home](#) > [Employee Service Management](#) > [HR Service Delivery](#) > [Integration of HR Service Delivery with ServiceNow applications](#) > [Performance Analytics for HR Service Delivery](#) > [HR Performance Analytics Scoped solutions](#) > Human Resources agent dashboard

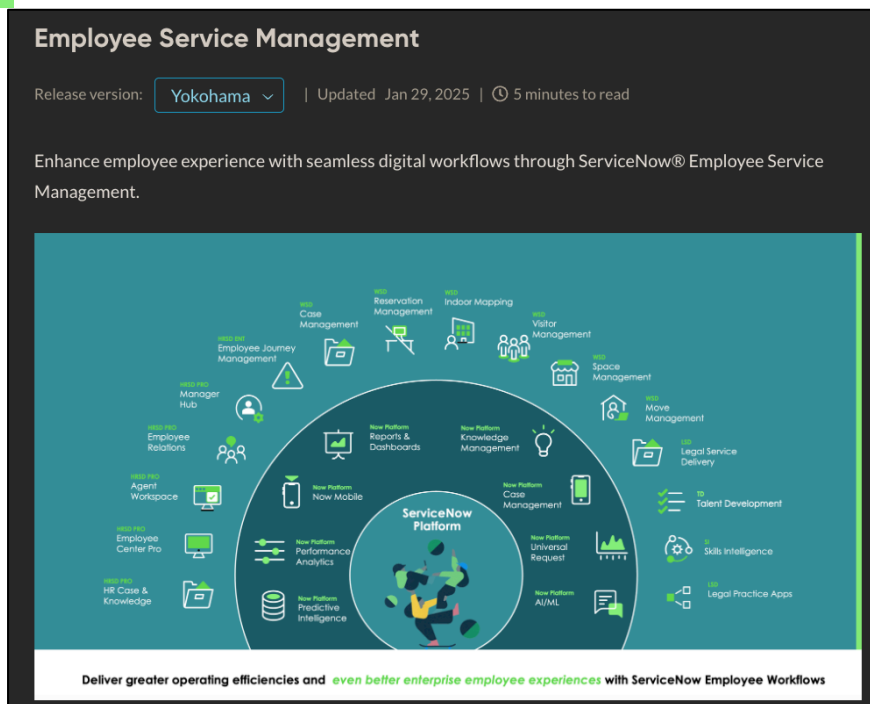

Note: By reading the topic path you can see the hierarchy of information for the product. In this example, you can see that the Human Resources agent dashboard is part of the Employee Service Management product suite and part of HR Service Delivery. You can also see the associated section on the left panel.

6. Locate the associated **topic sections** on the **left panel**.

7. Select the **Employee Service Management** topic.

Note: This looks like good information to share with the HR technical team.

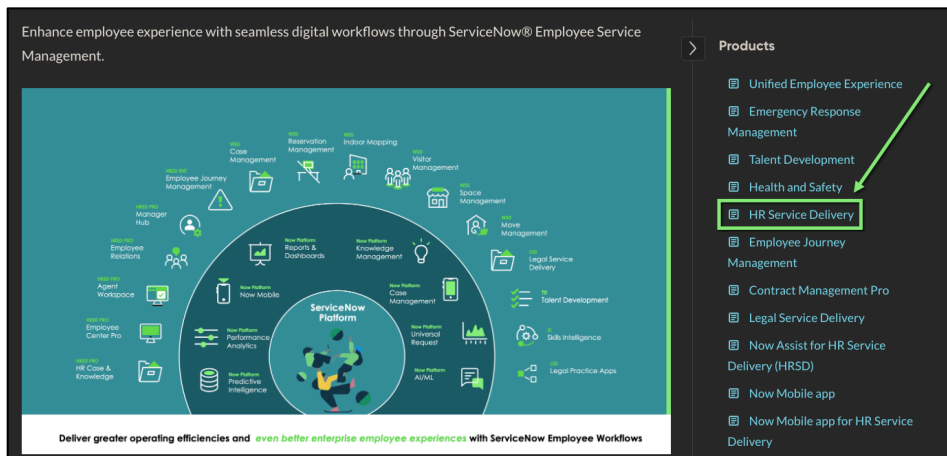

To **share** the information, you would copy the **URL** from the address bar and **paste** it into an **email**. You would then send the email containing the link to interested team members.

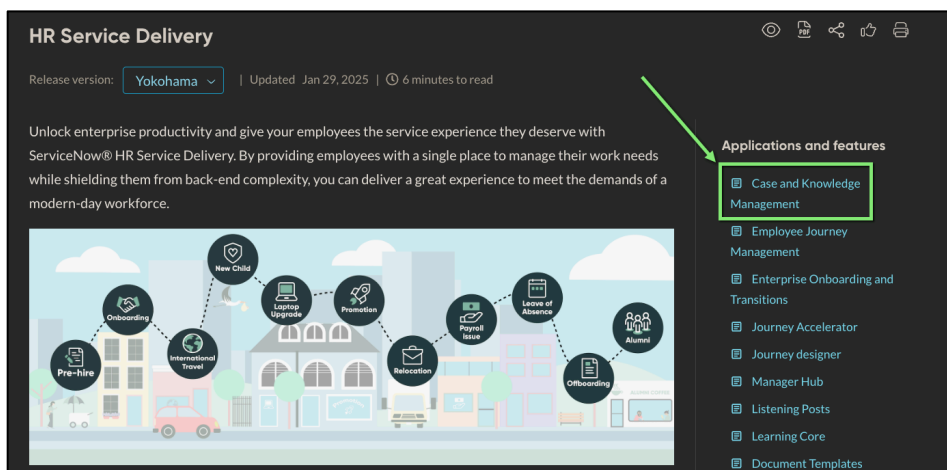

Note: For this exercise, you do not need to send the email.

servicenow.com/docs/bundle/yokohama-employee-service-management/page/product/employee-service-management/concept/employee-service-manageme...

8. From the **Products** list, select **HR Service Delivery**.

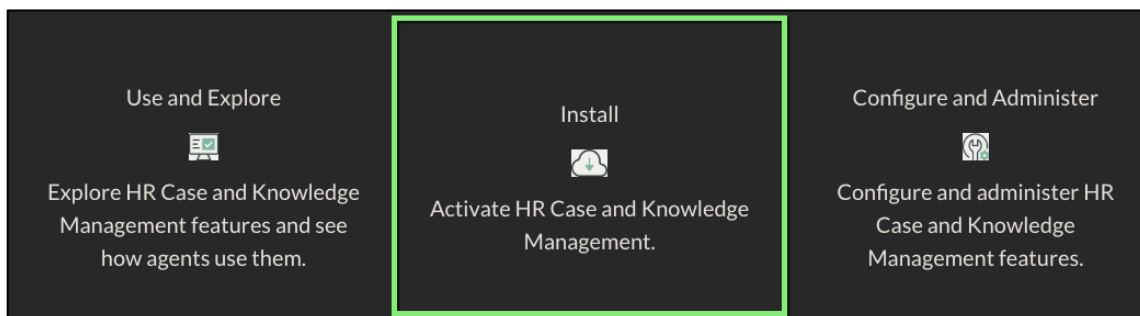

9. From the **Applications and features** list, select **Case and Knowledge Management**.

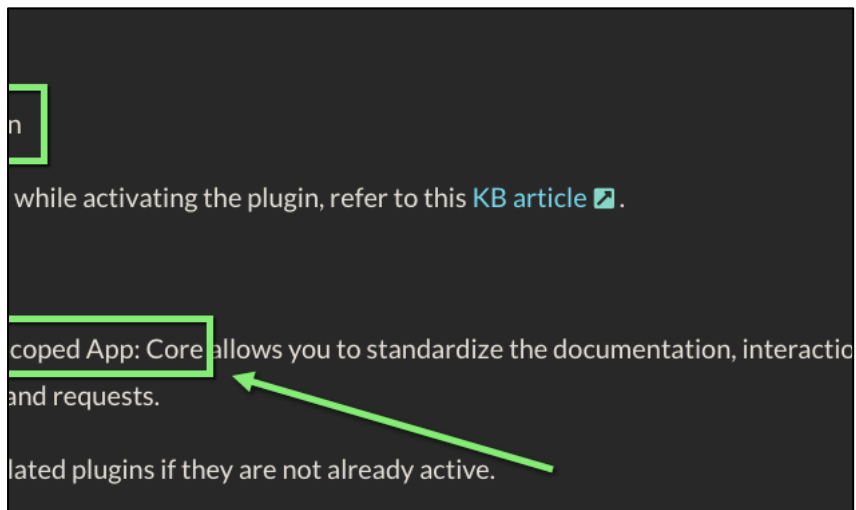

This is the page we need!

10. From the **Set up** section, select **Activate Case and Knowledge Management**.

11. Identify the **plugins** and **roles** needed to activate the plugin.

Note: In this case, you are activating a plugin, but in other situations, you may install the application from the ServiceNow Store.

Note: There are multiple plugins relating to the Human Resources Scoped App: Core, which are required. If they are not already activated in your instance, they will be installed along with the Human Resources Scoped App: Core.

12. Identify the related **plugins** and review their descriptions to understand the various components installed.

Plugin	Description
Human Resources Scoped App: Security [com.snc.hr.scoped_security]	Provides HR security.
Human Resources Scoped App: Integrations [com.sn_hr_integrations]	Provides HR Integrations.
Document Templates [com.snc.document_templates]	Provides Document Templates.
Human Resources Scoped App: Mobile [com.sn_hr_mobile]	Provides Now Mobile for HR Service Delivery.

No further action is required. The objective was to identify the plugin.

Congratulations! You have completed this lab.
