

Enable Quick Messages

Additional Practice

15 – 20 Minutes

Lab Objectives

You will achieve the following objectives:

- Explain how the email client adds value to task work
- Create an email template using Quick Messages
- Grant access to others, for managing email templates

Lab Dependency: None

Scenario

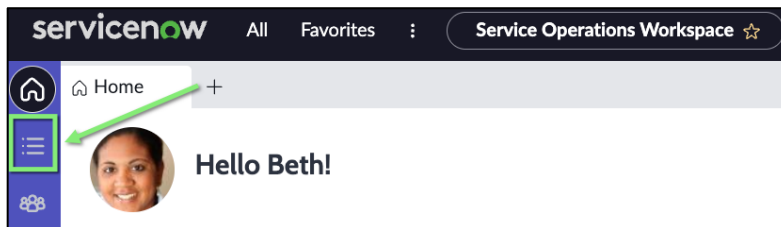

IT Support Agents have expressed a need for a faster way to communicate with customers. They have heard about something called quick messages but are not quite sure what they are or how to take advantage of them.

You will show Beth Anglin how to create Quick Message templates, which all members of her team will be able to use.

Section 1: Explore Email Client in a Workspace

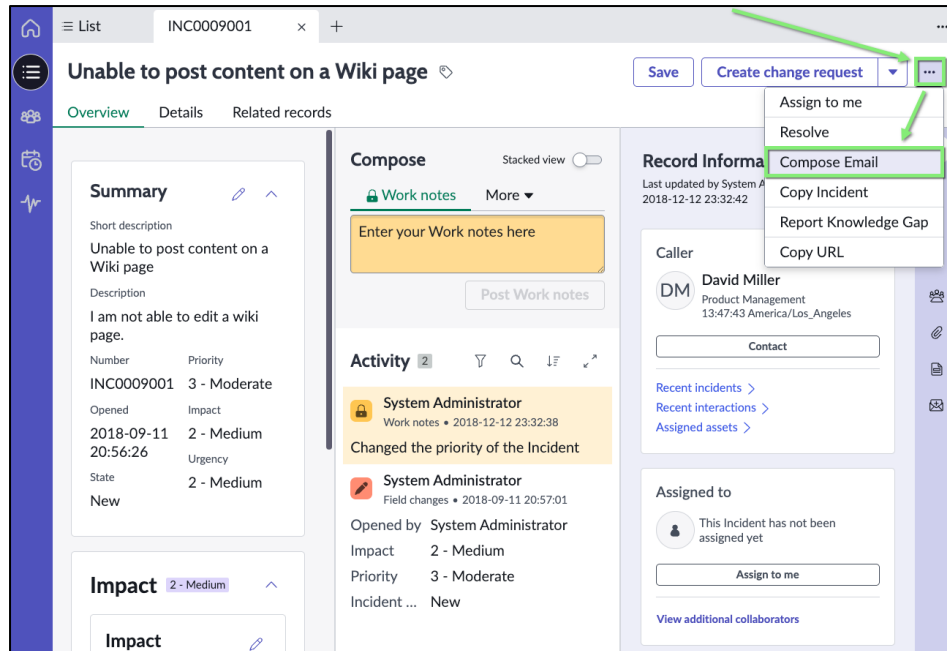

1. Impersonate **Beth Anglin**.
2. Navigate to **Workspaces > Service Operations Workspace**.

Note: You will initially be taken to the Workspace Landing Page. You can open an incident from the landing page. However, you can also interact in the workspace list view. Choose what works for you!

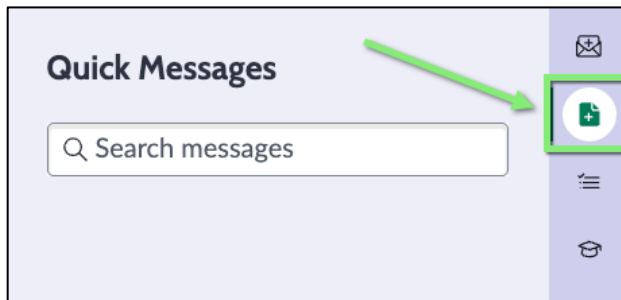

3. Open any **Incident**.

- On the top right of the Incident **Details** tab, select the **More Actions (...)** icon and select **Compose Email**.

The **Email Client** form displays with the **Quick Messages** panel on the right.

Note: Quick messages are templates for the Email Client.

- End impersonation.**

Note: It is OK to leave the form without saving.

Section 2: Grant Access and Create Quick Message Template

To create templates, Beth needs the `email_client_quick_message_author` role.

- Ensure you are logged in as **System Administrator**.
- Navigate to **Beth Anglin's** user record.
- Add the role, **email_client_quick_message_author**.

4. Select **Save**.
5. Impersonate **Beth Anglin**.
6. Navigate to **All > Email Client > Quick Messages**.
7. Select **New**.
8. Complete the form as follows:
 - Title: **HHD Pilot Welcome Message**
 - Active: **Selected**
 - User: leave empty
 - Group: **Service Desk**
 - Table: **Incident**

Next, you will build the body of the message as shown below. We'll take this one step at a time.

Dear \${caller_id.first_name},

Thank you for participating in the Infinity HHD Pilot! All the information you need to get started is below:

- Getting Started Manual
- FAQ
- Tips and Tricks
- How to provide feedback
- How to get help

Sincerely,

\${assigned_to}

\${assignment_group}

Dear Fred,

Thank you for participating in the Infinity HHD Pilot! All the information you need to get started is below:

- Getting Started Manual
- FAQ
- Tips and Tricks
- How to provide feedback
- How to get help

Sincerely,

Beth Anglin

Service Desk

Note: To personalize the message, you will embed variable names into the Body of the message. This allows you to pull in information from the Incident record, to include in the message.

9. In the **Body** field, type in the text as shown below:

Dear

Thank you for participating in the Infinity HHD Pilot! All the information you need to get started is below:

- **Getting Started Manual**
- **FAQ**
- **Tips and Tricks**
- **How to provide feedback**
- **How to get help**

Sincerely,

Now that the body of the text has been added, you can begin to add the variables.

10. First, you will add the **Caller's first name** to the salutation. Place your cursor next to **Dear**.

Dear|

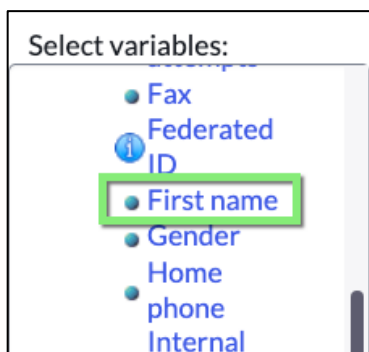

11. On the **Select variables** pane, select **+** on **Fields**.

12. On the **Caller** variable, select **+** to expand the list of associated **variables**.

13. Scroll down and select **First name**.

Note: By selecting on *First name*, both a label and the variable were inserted into the Body of the message.

14. Remove the **Caller First name:** label.

Dear **Caller First name:** {caller_id.first_name}
 Thank you for participating in the Infinity HHD Pilot! All the information you need to get started is below:

- **Getting Started Manual**

15. Add a **comma** after the **variable** name.

16. Validate your **salutation** looks like this.

Dear \${caller_id.first_name},

Thank you for participating in the Infinity HHD Pilot! All the information you need to get started is below:

17. Repeat the steps to add the **Assigned to name** and the **Assignment group name** at the bottom of the message.

Remember to remove the labels so that only the variables appear.

18. Verify your **Quick Message** matches these settings.

Note: Make sure **Active** is selected.

* Title: HHD Pilot Welcome Message

Active ☒

Only the selected user can use this quick message. Only users within the specified group can use this quick message.

User: Group: Service Desk

Specify the table and condition for which this quick message should be available in the email client. To make the quick message available for all tables, leave blank.

Table: Incident [Incident]

Conditions: [Add Filter Condition](#) [Add OR Clause](#)

-- choose field -- -- oper -- -- value --

The quick message body supports rich text, images, and any other HTML constructs. The content can also include global variables (for example, `current_user` and `URI_ref`) and variables that reference field values from the selected table.

* Body

information you need to get started is below:

- [Getting Started Manual](#)
- [FAQ](#)
- [Tips and Tricks](#)
- [How to provide feedback](#)
- [How to get help](#)

Sincerely,

`${assigned_to}`

`${assignment_group}`

[Submit](#)

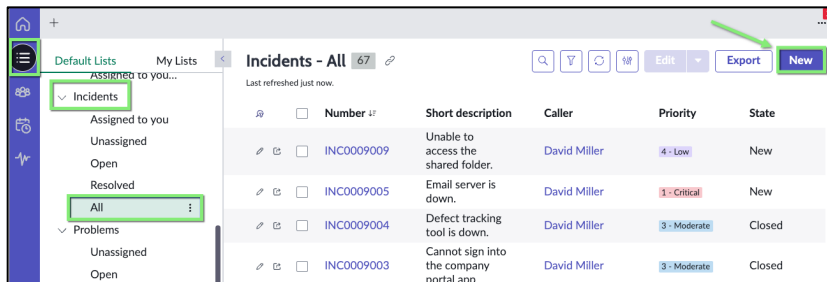

19. Select **Submit**.

Section 3: Verify the Quick Message in the Workspace

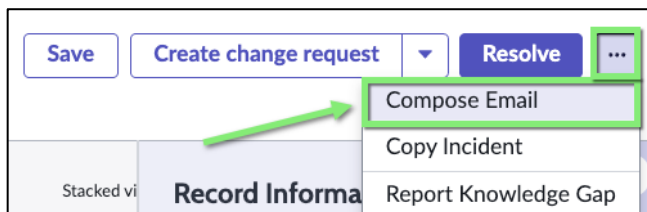

Since the quick message you just created is related to inquiries about the Infinity HHD Pilot, let's create a new incident related to this topic so you can verify the quick message in the workspace.

1. Ensure you are still impersonating **Beth Anglin**.
2. Navigate to **Workspaces > Service Operations Workspace**.

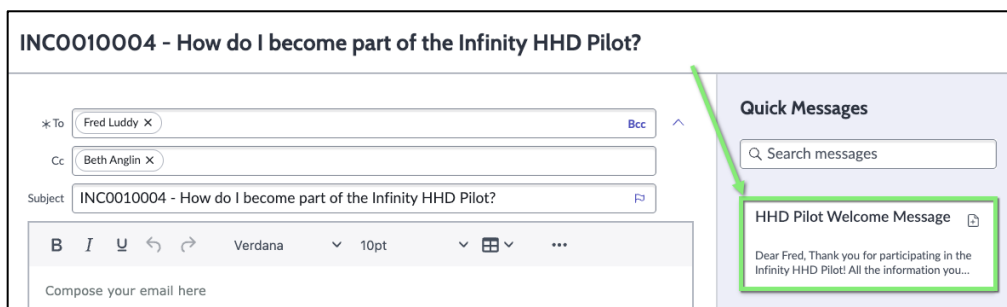

- From the **workspace** list, navigate to **Incidents > All**, then select **New**.

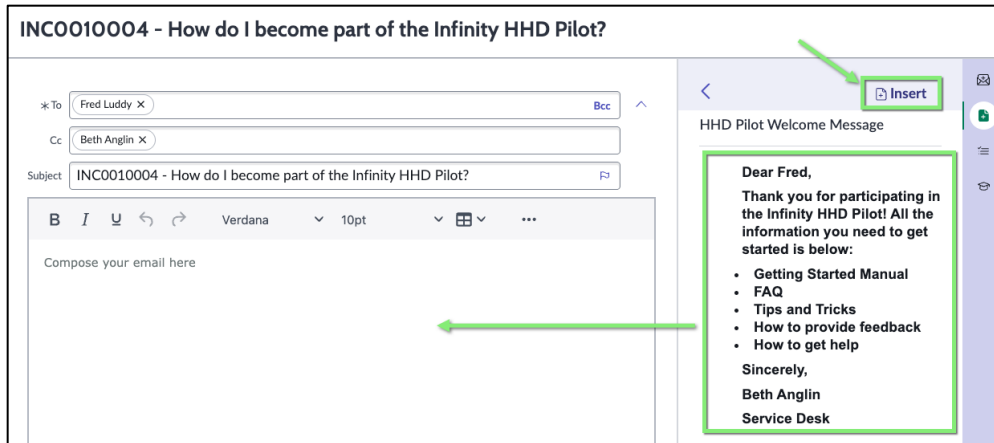

- Complete the form as follows:
 - Short description: **How do I become part of the Infinity HHD Pilot?**
 - Caller: **Fred Luddy**
 - Assignment group: **Service Desk**
 - Assigned to: **Beth Anglin**
- Select **Save**. Record the incident number. You will use it later.
- Select the **More Actions (...)** icon and select **Compose Email**.

A new message opens. Notice you now have a Quick Message you can utilize to quickly respond to the caller.

- Select the **Quick Message** card to **preview** the message.
- Select **Insert**.

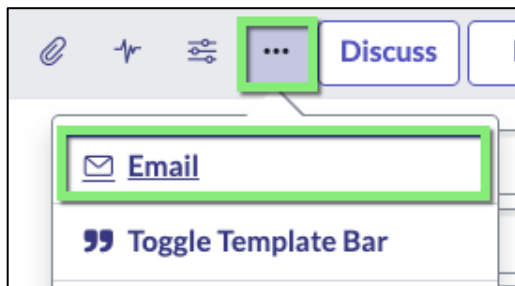

9. Select **Send Email**.

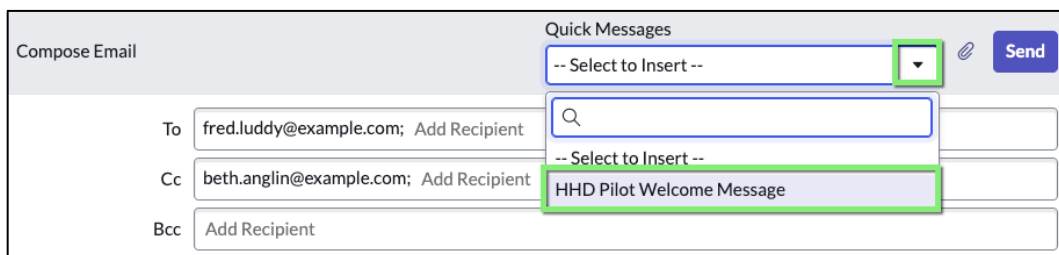

Section 4: Verify the Quick Message on Classic Form

Now that you have verified the quick message appears in the workspace, you need to test that it works in the **core environment** too.

1. As **Beth Anglin**, navigate to **All > Incident > Open**.
2. Locate and open the **incident** you created earlier (How do I become part of the Infinity HHD Pilot?).
3. On the top right, select the **More options (...)** icon.
4. Select **Email**.

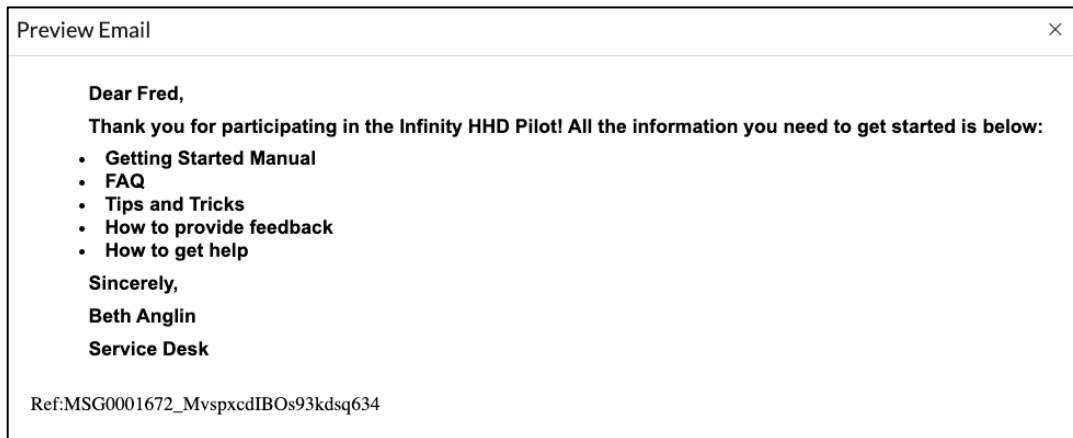

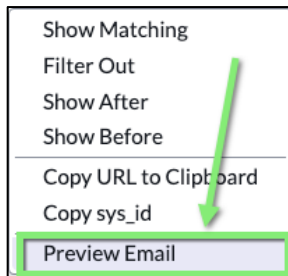

5. From the **Quick Messages** drop-down list, select **HHD Pilot Welcome Message**.

6. Select **Send**.
7. **End impersonation**.

Section 5: Verify Email Was Sent

1. As **System Administrator**, navigate to **All > System Mailboxes > Outbound > Outbox**.
2. Right-click on the **Created** column, then select **Sort (z to a)**.
3. Right-click on the **Created date** of the message you are testing, then select **Preview Email**.

Congratulations! You have completed this lab.
